Abstract

1 Restricted cubic spline

The usual specification for a restricted cubic spline is the following, where $(u)_+ = u$ if $u > 0$ and $(u)_+ = 0$ if $u \leq 0$:

$$x_i = (x - t_i)_+^3 - (x - t_{k-1})_+^3 \frac{t_k - t_i}{t_k - t_{k-1}} (x - t_k)_+^3 \frac{t_{k-1} - t_i}{t_k - t_{k-1}}, \quad i = 1, \ldots, k-2. \tag{1}$$

To combine this with sine interpolation of temperature, we simply need to integrate the following expression:

$$x_i^{ss} = 2 \int_0^{\pi} S_{ss} dS_{ss} \tag{2}$$
